

RF Pixel

What is RF Pixel?

The microplasma uses the energy of high-power radio frequency to produce micro-sparks that detach between the tip of the handle and the surface of the skin. These microplasma micro-sparks remove and heat the skin, creating a series of controlled microperfusion causing small areas of thermal injury. These micro-perforations occur when the tissue is vaporized, with only a part of the tissue being damaged.

The surrounding skin that is intact helps by activating the production of new skin regeneration. Unlike low-power and heat only the surface of the skin, damaging both mechanically and epidermis and dermis, providing a minimal epidermal damage.

technologies that require multiple sessions to achieve significant results, with Pixel RF™ you can achieve those same results in just one session.

to speed up the healing process collagen and elastin, leading to bipolar RF applicators that remove Pixel RF™ causes evaporation, thermally the deepest areas of the significant dermal impact with Compared to other RF sessions to achieve significant achieve those same results in just

RF Pixel Indications:

- Skin rejuvenation & skin tightening (Laxity, wrinkles, fine lines)
- Skin resurfacing
- Scars
- Pigmentation
- Open pores

Is it painful?

There is an intense feeling of heat. Client tolerance is dependant. Numbing agent can be applied.

How soon after filler/botox injections can I have a RF Pixel treatment on the face?

You need to wait a minimum of 2 weeks after having the treatment before having a RF Pixel treatment to ensure that your results are not compromised.

How long should it take before I see results?

Typically, you will see results after the first treatment. Lasting and more significant results will become visible after 3 to 6 treatments (spaced 4-8 weeks apart). The condition of your skin will continue to improve over the next 6-12 months after a course of treatments, especially when combined with the recommended post-treatment care.

Is there any downtime after treatments?

Generally no, but you may experience facial redness for 12- 48 hours after the treatment. Most people are able to return to normal daily activities immediately after the treatment. Application of the recommended post care treatments will heal the skin for an immediate return to work.

Preparation Before Treatment:

- No products with Retinol, AHA's, BHA's or Hydroquinone to be used on the area for 3 days prior to the area to be treated
- No peels, waxing, laser, electrolysis, threading for 2 weeks before the treatment
- No sun exposure for 1 week prior to the treatment

After the treatment:

- Cool the skin with cold packs or a fan if discomfort is experienced
- You will experience a downtime of 3-7 days – this will depend on client to client.
- Do not xfoliate at home or scratch the skin/ scabs that will form.
- Wound care is crucial after skin resurfacing; apply Ultra Repair cream as much as needed
- Following re-epithelialization, gentle cleansings begin a day or two later. The use of ointment is replaced during the day by use of a lighter moisturizer and sunscreen.
- Only clean, moisturize and use sunscreen for 7 days post treatment
- Once your peeling/ flaking has subsided, your normal skincare regime can be followed.
- Make-up can be applied to minimize roller or pixel appearance 24 hours post treatment – Preferable to wait 48 hours before applying make-up
- No peels, waxing, laser, electrolysis, threading for 2 weeks post the treatment
- No sun exposure for 1 week post treatment.

How many sessions will you need?

This will depend on each client and a unique treatment plan will be discussed with you but in general:

- 4 – 6 treatments (or when desired results are achieved)
- 4 week intervals between sessions (treatment area must be completely healed)
- Maintenance treatments are advised after desired results have been achieved

Why is aftercare important?

Homecare for your skin is like going to the dentist (You see your dentist twice a year however you brush your teeth everyday to maintain oral health)

The same concept applies to your skin care regime.

Aftercare/Homecare is vital to maintain your results from your in clinic treatment to ensure that we prevent any problematic concerns worsening because

"Prevention is always better than cure"

Risks and side-effects

- Not observing the guidelines especially related to sun exposure may lead to a transient but long-lasting hypo/hyperpigmentation that may last on the average 3 months.
- On sensitive areas, an oedema may develop but will remain no longer than 2 days.

Conditions NOT suitable for RF Pixel?

- Hypertension/Hypotension
- Fibromyalgia
- Epilepsy
- Chronic Arthritis
- Diabetics
- Blood Clotting Disorder
- Herpes Simplex (Fever Blister)
- Menopause
- Stroke/Cerebral Palsy
- Chronic Heart Conditions
- Cancer
- Aneurism
- Headaches/Migraines
- Auto Immune Disease
- Claustrophobia
- Eczema/Psoriasis

What payment options are there?

- You can pay session by session
- You can pay upfront in advance for a course of 4-8 sessions with a discount
